

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview for Request: cder_mpl1r_wp194

Request ID: cder_mpl1r_wp194_nsdp_v01

Request Description: In this report, we described patients with sickle cell disease (SCD) who were and were not dispensed hydroxyurea, and estimated the number of hospitalizations and emergency department visits among those patients in the Sentinel Distributed Database (SDD).

Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 10.3.0.

Data Source: We distributed this request to 7 Sentinel Data Partners on April 30, 2021. The study period included data from January 1, 2000 through September 30, 2020. Please see Appendix A for a list of dates of available data for each Data Partner.

Study Design: We identified individuals with SCD and without specific cancers which hydroxyurea may have been used to treat. See Appendix C for a list of International Classifications of Disease, Ninth and Tenth Revisions, Clinical Modification (ICD-9-CM and ICD-10-CM) diagnosis codes used to define inclusion and exclusion criteria in this report. Among those patients, we evaluated the occurrence of emergency department (ED) and inpatient (IP) encounters during periods when no hydroxyurea was dispensed, and during periods when hydroxyurea was dispensed. Results were stratified by age group, race, year, and five-year group by age group. This is a Type 2 analysis as described in the Query Request Package (QRP) documentation.

Cohort Eligibility Criteria: Three cohorts of patients were identified:

- 1. SCD cohort:** Patients were included in this cohort if they had a SCD diagnosis in any care setting at any time during the query period. Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the date of their first qualifying SCD diagnosis (index date); cohort re-entry was not allowed. Please see Appendix C for a list of ICD-9-CM and ICD-10-CM diagnosis codes used to define inclusion and exclusion criteria in this report.
- 2. Hydroxyurea-unexposed cohort:** Patients were included in this cohort if they had a SCD diagnosis in any care setting at any time during the query period. Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the date of their first qualifying SCD diagnosis (index date); cohort re-entry was not allowed. Follow-up of patients ended upon dispensing of ≥ 30 days' supply of hydroxyurea, which was defined using outpatient dispensing data and National Drug Codes (NDCs). Please refer to Appendix B for a list of generic and brand names of medical products used to define exposures in this report.
- 3. Hydroxyurea-exposed cohort:** Patients included in this cohort were required to have a diagnosis of SCD at any time prior to the first qualifying (index) dispensing of ≥ 30 days' supply of hydroxyurea (exposure of interest). Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the date of the index date; cohort re-entry was not allowed.

In all three cohorts, patients with a diagnosis of chronic myeloid leukemia and certain head and neck cancers in the 183 days prior to and including the index date were excluded due to competing indications for hydroxyurea. Additionally, follow-up of all patients ended upon diagnosis of any of these cancers. We included patients of all ages categorized into the following groups based on age at index date: 0-17 years, 18-49 years, and 50+ years. The first age group was further divided into groups of 0-5 years, 6-11 years, and 12-17 years; the final age group was further divided into groups of 50-59 years, and 60+ years.

Outcome of Interest: We defined the outcome of interest as any encounter in the ED or IP setting. All encounters that occurred during follow-up were counted.

Overview for Request: cder_mpl1r_wp194

Follow-Up Time:

1. SCD cohort: Follow-up began on the day of the first SCD diagnosis and continued until the first occurrence of: 1) disenrollment, 2) death, 3) the end date of the data provided by each Data Partner, 4) the end of the query period, or 5) diagnosis of the same cancers listed for exclusion.

2. Hydroxyurea-unexposed cohort: Follow-up began on the day of the first SCD diagnosis and continued until the first occurrence of: 1) disenrollment, 2) death, 3) the end date of the data provided by each Data Partner, 4) the end of the query period, 5) diagnosis of the same cancers listed for exclusion, or 6) hydroxyurea dispensing of ≥ 30 days' supply.

3. Hydroxyurea-exposed cohort: Follow-up began on the day after the first valid hydroxyurea dispensing of ≥ 30 days' supply and continued until the first occurrence of: 1) disenrollment, 2) death, 3) the end date of the data provided by each Data Partner, 4) the end of the query period, or 5) diagnosis of the same cancers listed for exclusion.

Additional Baseline Tables: A baseline table is presented for the SCD cohort and four additional cohorts as described below.

1. SCD not dispensed hydroxyurea: Patients were included in this cohort if they had a SCD diagnosis in any care setting at any time during the query period. Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the date of their first valid SCD diagnosis (index date); cohort re-entry was not allowed. Patients with any hydroxyurea dispensing or any diagnosis of the cancers listed as exclusions in the 183 days prior to and including the index date were excluded.

2. SCD never dispensed hydroxyurea: Patients were included in this cohort if they had a SCD diagnosis in any care setting at any time during the query period. Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the date of their first qualifying SCD diagnosis (index date); cohort re-entry was not allowed. Patients with any hydroxyurea dispensing in the 183 days prior to their index date through the end of their enrollment or any diagnosis of the cancers listed as exclusions in the 183 days prior to and including the index date were excluded.

3. SCD ever dispensed hydroxyurea: Patients were included in this cohort if they had a SCD diagnosis in any care setting at any time during the query period. Patients were additionally required to have a dispensing of any days' supply of hydroxyurea in the 183 days prior to their first qualifying SCD diagnosis (index) through the end of their enrollment. Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the index date; cohort re-entry was not allowed. Patients with a diagnosis of any of the cancers listed as exclusions in the 183 days prior to and including the index date were excluded.

4. SCD and cancer: To characterize the patients excluded for specified cancers, patients were included in this cohort if they had a SCD diagnosis in any care setting at any time during the query period, and were additionally required to have a diagnosis of chronic myeloid leukemia or certain head and neck cancers in the 183 days prior to and including the index date. Patients were required to be enrolled in health insurance plans with both medical and drug coverage on the date of their first qualifying SCD diagnosis (index date); cohort re-entry was not allowed.

Overview for Request: cder_mpl1r_wp194

Baseline Characteristics: For all cohorts, we considered the following demographic characteristics on the index date: age, sex, race, ethnicity, and calendar year. We assessed the following characteristics in the 183 days prior to and including the index date: Charlson/Elixhauser combined comorbidity score¹, health services and drug utilization, acquired hypothyroidism, acute myocardial infarction, Alzheimer's disease and related disorders, anemia, asthma, atrial fibrillation, benign prostatic hyperplasia, breast cancer, chronic kidney disease, colorectal cancer, chronic obstructive pulmonary disease (COPD) and bronchiectasis, depression, diabetes, endometrial cancer, glaucoma, heart failure, hyperlipidemia, hypertension, ischemic heart disease, lung cancer, osteoporosis, prostate cancer, rheumatoid arthritis and osteoarthritis, stroke and transient ischemic attack, acute myeloid leukemia, acute chest syndrome, and use of the following medical products: crizanlizumab, gabapentin, non-steroidal anti-inflammatory drugs (NSAIDs), pregabalin, voxelotor, L-glutamine oral powder (Endari™), and any glutamine. In the hydroxyurea-exposed cohort, we additionally evaluated use of crizanlizumab, voxelotor, Endari™, and any glutamine in the 30 days prior to index through 60 days following index, as well as at any point in the patient's recorded history. Please see Appendix D for a list of ICD-9-CM and ICD-10-CM diagnosis codes, Appendix E for a list of generic and brand names of medical products and Appendix F for a list of Healthcare Common Procedure Coding System (HCPCS) codes used to define baseline characteristics in this request.

Limitations: Algorithms to define exposures, inclusion, and exclusion criteria are imperfect and may result in misclassification. Therefore, data should be interpreted with this limitation in mind.

Please see Appendices G - L for the specifications of QRP parameters used in this request.

**Glossary of Terms for Analyses Using
Cohort Identification and Descriptive Analysis (CIDA) Module***

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Charlson/Elixhauser Combined Comorbidity Score - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

Code Days - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

Cohort Definition (drug/exposure) - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

Computed Start Marketing Date - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled"

Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

Event Deduplication - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

Lookback Period - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered.

Minimum Episode Duration - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

Switch Evaluation Step Value - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

Switch Gap Inclusion Indicator - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

Switch Pattern Cohort Inclusion Date - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

Switch Pattern Cohort Inclusion Strategy - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

¹ED visits occurring on the same day as hospitalization admission are only counted once in this measure, thus the total events may be less than the sum of the ED visit and hospitalization measures combined.

*****Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

Appendix G. Specifications Defining Parameters for this Request

This report executed the Cohort Identification and Descriptive Analysis (CIDA) tool, version 10.3.0, to examine the use of hydroxyurea among patients with sickle cell disease in the Sentinel Distributed Database (SDD).

Query period: January 1, 2000 - September 30, 2020
Coverage requirement: Medical & Drug Coverage
Pre-index enrollment requirement: 183 days
Post-index enrollment requirement: 0 days
Post-episode enrollment requirement for Type 2 analyses: 0 days
Enrollment gap: 45 days
Age groups: 0-5, 6-11, 12-17, 18-49, 50-59, 60+; collapsed 0-17, 50+ years
Stratifications: Age group, Calendar year, Race, Age x Year
Envelope macro: No reclassification on inpatient admission date

Scenario	Function	Multiple events episode	Baseline Table?	Exposure								Principal diagnosis position	Censor treatment episode at evidence of:
				Index Exposure	Cohort definition	Incident exposure washout period	Point exposure?	Risk window start	Maximum episode duration	Care setting
